- Prisma ORM
- REST/RESTful API
- Redux
- React Native
- NoSQL databases
- OOP
- Python
- PHP
- Bootstrap
- Git/Github
- NPM/Yarn/Pnpm

WORK EXPERIENCE

Actitude

Remote

Fullstack Web Developer

9/2024

As a key member of Actitude, a Danish non-profit startup, I help lead the development and maintenance of our digital platforms, building out the frontend with React and backend with PHP/MySQL. This role covers everything from updating current code to make it more readable and functional, to adding entirely new features and sections to the site. By working on both sides of our platform, I help Actitude provide free support to individuals, NGOs, and companies striving to create a better world.

Rayca Precision

Remote

Software Engineer

3/2024 - 8/2024

Throughout this internship, I immersed myself in cutting-edge technologies, seamlessly navigating both frontend and backend development. Notably, collaborated on pioneering AI projects with Google Cloud, further enhancing my skill set. I honed my craft in web development, employing tools like Next.js, Tailwind CSS, Framer Motion, and Typescript for frontend magic. Meanwhile, my backend endeavors were powered by the robust combination of Node.js, Express.js, MongoDB, Mongoose, and Typescript.

PROJECTS

barebnb - Fullstack airbnb clone

[website](#) [github repo](#)

This website was created with NextJS 13, Prisma ORM, Tailwind CSS, TypeScript, React Query and zod. It utilizes server components for faster rendering, and when that's not available React Query takes over. There is instant form validation with zod, and an s3 bucket is used for image uploads.

rides - Fullstack car marketplace ^{*WIP*}

[github repo](#)

This website is created with Next.js 14, Mongoose, Tailwind CSS, TypeScript, and zod. It comes with complete validation (client and server), custom forms, image uploads with s3, custom user auth with clerk, and an admin dashboard.
